# EGIS-ASSIST

Smart Phone App

The EGIS Assist app is designed to operate on any Apple or Android smart phone, providing a set of tools for monitoring the personal safety of your staff.

The app offers several user monitoring features, which interfaces into the Sec-Eng Pegasus tracking platform.

FEATURES:

- User location via the on-board GPS & mobile network
- Ability to show location & poll in a real time
- Single touch duress reporting
- Pre-dial call monitoring button
- Monitor Me functionality timer
- Live feedback of the user's status on Pegasus
- Graphical screens for mode of operation
- An Australian designed and developed application

EGIS-ASSIST
Smart Phone App

The EGIS Assist app is based on our EGIS man down product. It has been designed with similar features such as an SOS alarm, location tracking, man down (tilt), and the newly added feature monitor me.

By combining the accessibility of a phone app with the reliability of the Pegasus tracking platform, it provides a powerful set of tools at your disposal for work safety and personal tracking.
